Product Description

Compact Modular Fiber Optic Spectrometer 200nm - 1100nm

SR50C redefines in-situ water analysis with its high-speed spectral processing (1000 scans/sec). Environmental agencies benefit from continuous phosphorus monitoring with 1-minute temporal resolution, capturing rapid pollution events previously undetectable by manual sampling.

The spectrometer's modular design allows quick replacement of diffraction gratings and detectors, future-proofing investments as water quality regulations evolve. Integrated with machine learning models, it automatically flags abnormal spectral patterns indicating emerging contaminants beyond standard parameters.
